The new hacker's dictionary

a.k.a The jargon file

The new hacker's dictionary²

Raymond began his programming career writing proprietary software, between 1980 and 1985. In 1990, noting that the Jargon File had not been maintained since about 1983, he adopted it; he currently has a third edition in print. Paul Dourish maintains an archived original version of the Jargon File, because, he says, Raymond's updates "essentially destroyed what held it together." ¹

The Cathedral and the Bazaar

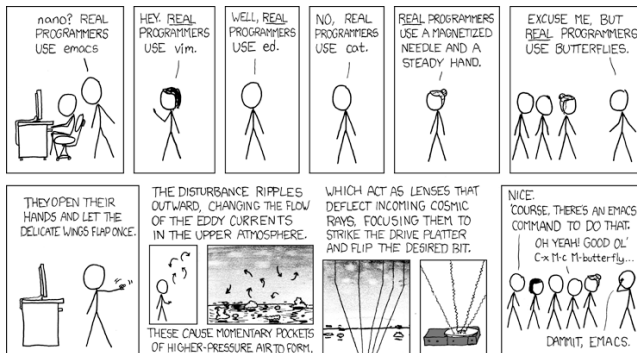

The Cathedral and the Bazaar

最初, 有一种人叫“真程序员”(Real Programmer)。他们并不这样自称, 也不自称为黑客或者别的什么。据他们中的一位回忆, “真程序员”这个称呼是在上世纪 80 年代以后才出现的。自 1945 年以来, 计算机技术吸引了世界上最睿智和最有创意的人, 从 Eckert 和 Mauchly 发明的第一台 ENIAC 开始, 就有一批编程爱好者, 并或多或少伴随着一种他们自己能意识到的技术文化, 他们编软件和玩软件只是出于乐趣。

“真程序员”通常具备工程学和物理学背景, 并常常是业余无线电爱好者。他们穿着白色袜子、涤纶衬衫, 打着领带, 带着厚厚的眼镜, 使用机器语言、汇编语言、FORTRAN 或者其他一些已经被人们遗忘了的古老的编程语言。

“真程序员”文化和批处理计算 (尤其是批处理技术) 密切相关, 随着交互式计算、大学和网络的兴起, “真程序员”文化逐渐衰落, 另一个工程师文化诞生并最终演化成今天的开源黑客文化。

Real Programmers⁴

Aunt Tillie

- 1 Aunt Tillie test: The archetypal non-technical user, one's elderly and scatterbrained maiden aunt. Invoked in discussions of usability for people who are not hackers and geeks; one sees references to the "Aunt Tillie test"
- 2 The term was invented by Eric Raymond, who added it to the Jargon File despite being the only person who used it.
- 3 The irony, as pointed out by John Gruber regarding the linux-kernel post in which Aunt Tillie was first invoked: "It wasn't [Aunt Tillie] who couldn't connect to a shared printer. It was Raymond himself who couldn't figure it out."⁵
